

Contaminated Blood - Another Cover-Up??

Now, an investigation into who is responsible for the several thousands who died in the 70s and 80s from contaminated blood, spreading HIV and Hepatitis. Really the 70s has been thrown into the pot to avoid stating what was obvious at the time...

The cause was the giving out of blood donated by homosexuals, even though some (including myself) warned this was both stupid and irresponsible, given the already known infection of homosexuals, who began to be infected with what became known as AIDS, plus other life-threatening diseases.

The warning was ignored as government deliberately misled the public about the cause of AIDS (homosexual behaviour, which was the SOLE cause).

I further warned that by presenting AIDS as the problem of 'everyone', many millions would die. This indeed occurred. By pretending AIDS was everyone's problem, homosexuals were hidden from view as the ONLY cause. Though we warned against using blood given by homosexuals, government rejected the warning NOT because there was no evidence, but because of homosexual activist propaganda. At the time even the majority of doctors in the UK were misled, through the issue of teaching materials that refused to place blame for HIV/AIDS where it should have been put – squarely on homosexuals and what they do.

So, at the time some of us KNEW what was happening and issued grave warnings about not publicly identifying the cause of blood transfusion disasters. In the early 1980s all my researches pointed to just one cause – homosexuals. The net result was the loss of my job as both new head of a new uni. research department (which had not even begun) and as a health lecturer. This was followed by a vicious campaign to make me unemployable in colleges ever again. And death threats followed.

Thus, the current 'investigation' is a farce, a public relations exercise... and exactly the same false conclusions will be reached, to whitewash homosexuals and their sexual perversions, and their refusal to have 'safe sex' (not possible in real terms). The government ALREADY KNOWS what caused the transfusion deaths, but they did not stop homosexuals giving blood! I KNOW this happened because I saw it first-hand at the time!! I also saw the way government falsely blamed the whole population for what was caused by just one group – homosexuals. Enormous

Contaminated Blood - Another Cover-Up??

sums

were spent on this wicked cover-up, and it still goes on. And most GPs are ignorant about the REAL causation of a foul choice of lifestyle that kills, because very few know the truth – they are all fed lies by official medical associations and government. Doctors who originally opposed the lies were, like me, removed from their jobs.

We can expect a propagandised 'result' from the investigation. But, GOVERNMENT is at fault for giving homosexuality an easy ride, refusing to blame it for the entire atrocity that continues to this day. Millions have already died. Just focussing on blood transfusions is a scape-goat activity, for the REAL cause (homosexuality) will probably be avoided. Even if it is identified, I am pretty sure it's role will be minimised, and, once again, blame will be spread throughout society.

This, however, was also predicted by myself way back in the early 80s. But, the fault is NOT on all of society. With any pandemic it is essential to identify the actual root cause, so that it can be eliminated. With homosexuality, however, no-one dared to identify the true cause, and so it got worse and worse and is now probably a bigger killer than the Black Death.

In my original research, which was 'buried' by my college and by government, I predicted what would happen if government continued to neglect the truth. I plotted (backwards) how the incidents in Africa came about via homosexuals. I also plotted into the future, WHO would be the next victims, and that heterosexuals would start to show incidents, via so-called bi-sexuals, homosexuals who used prostitutes, and drug takers. Sadly, every one of my half dozen or so predictions came about over a short period of time. To get into the heterosexual population, it was necessary for homosexuals to do it, via bi-sexuality, drug use, etc. Otherwise it would not have spread to that segment of society. Today, the majority of HIV and AIDS worldwide is amongst homosexuals, proving the point... and they simply don't care!

Watch the wriggling of the government with this one – and remember my prediction!

Notice the BBC also refuse to even mention the source of the contaminated blood in their news bulletins.
